

This is an **Architect's studio** website. The architect is a friend of mine so it matters a lot to me. :)

## Must

This website:

- should be done in Wordpress, using Bootstrap
- should be responsive (we need to test it on different devices)
- should have clean code

## Prototype

I've already made all the psds and they are already been approved, so the best way to show you the graphics is here, throughout the navigable prototype I've made:

<http://laari.it/gazzola/index.html>

This is a very simple and clean website. Nothing is really "strange".

The **structure** is:

1. home page
2. architettura del paesaggio [EN landscape architecture]
  - valutazioni ambientali [EN environmental assessments]
  - piani e progetti [EN plans and projects]
  - relazioni paesaggistiche [EN relations landscape]
3. efficienza energetica [EN energy efficiency]
  - audit energetici [EN energy audits]
  - studi di fattibilità [EN feasibility studies]
  - fonti rinnovabili [EN renewable sources]
  - certificazioni energetiche [EN energy certificates]
4. lo studio [EN studio/about]
5. contatti [EN contacts]
6. links

There is no links page yet, but it will be just a list of links.

## DESCRIPTION OF EACH PAGE:

1. **HOME PAGE** template is very simple: there is a big image and a short description of the services. The yellow and the green shapes will be clickable and they will bring to their page

## 2. ARCHITETTURA DEL PAESAGGIO, 3. EFFICIENZA ENERGETICA

They both have the exactly the same layout.

As you can see, there is a lateral left menu with the subpages that should be fixed while scrolling the page.

# architettura del paesaggio

VALUTAZIONI AMBIENTALI

---

PIANI E PROGETTI

---

RELAZIONI PAESAGGISTICHE

---

These pages are the projects, so they should be updatable by admin from the backend.

We have a carousel on top with different images in every page and some texts

Download brochure, will open a pdf.

#### **4. STUDIO**

It's the about page. If it could be updatable from the backend it's better.

#### **5. CONTACTS**

We have google maps embedded and a small form.

#### **MENU**

Is fixed on the top and it has two dropdown menu (architettura del paesaggio, efficienza energetica). There are also two or three social icons

#### **SOCIAL ICONS**

in the internal page, you can see three buttons, they did exactly what you have made for Inovaria project. There is only Pinteres in addition.
